Randwick City Council is committed to providing quality services and facilities that are valued by our residents and ratepayers. This is the second year of Council's Our Community Our Future program, which was widely consulted with the community.

We are set to deliver some significant projects including 4.9km of road upgrades and 3km of new and improved footpaths.

There are 277km of local roads and 827,000 square metres of footpaths in Randwick City that we are responsible for maintaining. This year, we will spend $10.1 million on roads and footpaths upgrades and more than $22.9 million on buildings and open space projects.

Some of the projects that Council is undertaking across Randwick City this year include:

Sustainability

More Gross Pollutant Traps will be installed to improve the quality of stormwater runoff and water recycling plants will treat stormwater to irrigate our parks. We'll also address community concern around stormwater pollution at Coogee Beach in partnership with the State Government.

Smart technology

We will implement smart technology at our beaches and town centres to make moving around and using public spaces easier and more efficient. This will include sensors on our bins, BBQs and toilet blocks to make cleaning and servicing them more efficient – ultimately delivering a better experience for beach-goers.

The map shows you just some of the projects and upgrades we've got planned for Central Ward in the coming year, as well as local road and footpath upgrades and projects we've recently completed.

To find out more information about these projects in Central Ward, visit our website **www.randwick.nsw.gov.au**

Local residents directly affected by construction will be notified in writing prior to work commencing.
